This file contains the following supplementary information for Topic 5 of the manuscript *Digging under the surface of COVID-19 topics in scientific literature*:

- Human label and automatic n-gram label proposals (Table 1)
- Summary measures (Table 2)
- Network of top 25bigrams (Figure 1)
- Wordclouds of top 25 words by node relevance measure (Figure 2)
- Wordclouds of top 25 bigrams by edge relevance measure (Figure 3)
- Filtered (99 percentile) topic network (Figure 4)
- Automatic n-gram label proposals of subtopics, if multiple subtopics of large size exist (Table 4)
- Network of top 25bigrams (Figure 5)

Table 1: Human and automatic label proposals. Automatic label candidate for largest word community of the topic. In parenthesis: absolute frequency of the walk out of a sample of size 1000.

Human label	2-gram label	3-gram label	4-gram label
epidemic models	mathematical->model (10.3%)	epidemic->used->model (6.7%)	reproduction->number->R0->model (2.9%)

Here follows the set of topic-specific measures that have been used to classify the topic and to analyse its structural properties (see manuscript for details):

Table 2: Summary measures

	JSD	Mean propensity	Variance propensity	Modularity	Barrat Clustering Coeff.
value	0.637157	0.010230	0.000681	0.000000	0.599124
rank	52	116	105	27	92

Based on the aforementioned measures, Topic 5 has been classified as a SPECIALIZED topic.

[illegible]

A word cloud of terms related to epidemiological modeling. The most prominent word is 'model'. Other significant words include 'reproduction', 'dynamics', 'population', 'spread', 'data', 'results', 'scenarios', 'obtained', 'peak', 'simulations', 'different', 'basic', 'number', 'estimated', 'epidemic', 'applied', 'used', 'time', 'parameters', 'show', 'predict', 'estimates', 'different', 'basic', 'number', 'estimated', 'epidemic', 'applied', 'used', 'time', 'parameters', 'show', 'predict', 'estimates'.
