LDA2Net: Digging under the surface of COVID-19 topics in literature

Topic 76 companion sheet

G. Minello C.R.M.A. Santagiustina M. Warglien

This file contains the following supplementary information for Topic 76 of the manuscript "LDA2Net: Digging under the surface of COVID-19 topics in scientific literature":

- Human label and automatic n-gram label proposals (Table 1)
- Summary measures (Table 2)
- Network of top 25 bigrams (Figure 1)
- Wordclouds of top 25 words by node relevance measure (Figure 2)
- Wordclouds of top 25 bigrams by edge relevance measure (Figure 3)
- Filtered (0.99 percentile) topic network (Figure 4)

Table 1: Human and automatic label proposals. Automatic label candidate for largest word community of the topic. In parenthesis: absolute frequency of the walk out of a sample of size 1000.

| Human label | 2-gram label | 3-gram label | 4-gram label |
|----------------------|------------------------|---------------------------|----------------------------------|
| UK pandemic timeline | first->time (21.1%) | first->time->UK (7.1%) | first->time->UK->weeks (3.5%) |

Here follows the set of topic-specific measures that have been used to classify the topic and to analyse its structural properties (see manuscript for details):

 ${\bf Table\ 2:\ Summary\ measures}$

| | JSD | Mean propensity | Variance propensity | Modularity | Barrat Clustering Coeff. |
|-------|----------|-----------------|---------------------|------------|--------------------------|
| value | 0.672715 | 0.007501 | 0.000132 | 0.004132 | 0.559307 |
| rank | 66 | 20 | 16 | 55 | 36 |

Based on the aforementioned measures, Topic 76 has been classified as a CROSS-CUTTING topic.

Figure 2: Top 25 unigrams (i.e., nodes) by measure.

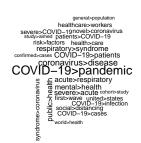

Figure 3: Top 25 bigrams (i.e., edges) by measure.

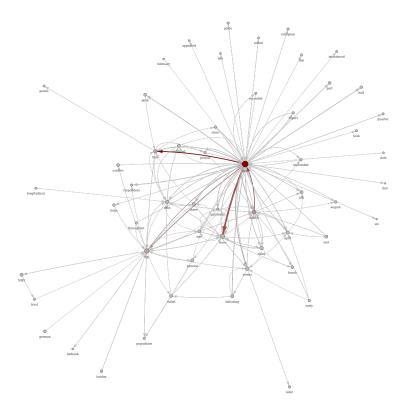

Figure 4: Filtered topic network (by weight). Layout based on Fruchterman-Reingold algorithm. Node size is proportional to topic-specific word probability provided by LDA. Edge width is proportional to topic-specific bigram weight provided by LDA2Net method. Node and edge color represent their betweenness centrality. Isolated nodes have been removed after filtration.
